MONTHLY QA
AUTOMATED ANALYSIS OF QA TASKS

PIPSPRO™ SOFTWARE
PIPSpro software and phantoms are valuable tools for streamlining over 30 of the TG-142 tests, automating data analysis, and providing documentation of the test results. By providing quantifiable and repeatable results, PIPSpro makes it easier for our center to become compliant with TG-142.

MONTHLY QA

TG-142 MADE EASY
DESIGNED WITH A CONVENIENT AND OPTIMIZED WORKFLOW IN MIND

- Simple, clean and consistent user interface
- Easy-to-read reports, charts, and graphs
- PDF and comma separated variable (CSV) results export
- Multiple open modules for streamlined workflow
- Physicist-controlled editor for creating testing baselines
- Tracking and trending for test results
- Quick Selects™ for organizing tests and accessing test results
- Automatic image compositing for EPID MLC QA and StarShot images
- Centralized database for easy configuration and accessibility to results
- Complete Varian and Elekta IMRT and VMAT logfile analysis
- Workflow automation - single click deployment results
- Now includes Stereotactic collimator rotation

AUTOMATIC REGION IDENTIFICATION
By automatically identifying analysis regions, subjectivity is reduced and results consistency is improved.

PLANAR IMAGING QA
PIPSpro kV planar imaging QA uses images obtained with Standard Imaging’s QC-kV1 phantom or Leeds Test Objects’ TOR CDR phantom. Testing is supported for kV imagers integrated with linear accelerators as well as images from ExacTrac, Cyberknife, and C-Arms. EPID MV planar imaging QA uses Standard Imaging’s calibrated QC-3 phantom.

CT IMAGING QA
Using cone beam or diagnostic images obtained with any of the Catphan phantoms (503, 504, 600), PIPSpro automatically finds analysis image slices and performs required TG-142 tests (geometric distortion, spatial resolution, contrast, HU constancy, uniformity and noise). Results are colored green (“Pass”), amber (“Alert”), or red (“Fail”) for easy viewing of status (this scheme is used throughout PIPSpro).
RADIATION LIGHT FIELD ANALYSIS
PIPSpro uses a single image taken with custom phantoms (FC-2, Center Marker) to calculate:
- Radiation and light field coincidence
- Radiation and crosshair displacement
- Light field and crosshair displacement
- Jaw position measurements
- Light field rotation

STARSHOT ANALYSIS
PIPSpro’s StarShot module uses EPID MV or film images to measure rotational deviations in gantry, collimator, and couch mechanical isocenters. Results are expressed as the minimum diameter containing all spokes at the central point of intersection.

DAILY IGRT QA TRACKING
Use the Standard Imaging MIMI (Multi-Image Modality Isocentricity) phantom with image registration software to calculate known 3D \((x, y, z)\) and 6D (add couch pitch, yaw and roll) offsets. PIPSpro allows you to record your daily offsets and track and trend your results.

STEREOTACTIC 3D
Use Standard Imaging’s Winston-Lutz phantom to measure the difference between the radiation isocenter and the mechanical isocenter for a linear accelerator. A number of images are taken with your portal imager using fixed angles or angles of your choice.
- Automatically load and analyze any images, including DICOM images, for cones or MLC’s.
- Automatically get 2D radiation/mechanical offsets for each image.
- Automatically get an optimal 3D offset to correct patient offset errors.
- 3D analysis with \(x, y, z\) results that help you improve patient positioning.

UPLOAD RESULTS TO QA PILOT
PIPSpro QA Portal to automatically upload test results to Standard Imaging’s QA Pilot QA database software.

PIPSpro MLC QA gives you actionable, quantitative results that allow you to track and trend all TG-142 requirements, delivering critical information that may indicate an impending MLC failure or indicate the need to recalibrate your machine for the best possible clinical outcomes. Step & Shoot and VMAT parameters are tested in any direction using MLC leaf pattern files (*.mlc, *.dva, *.efs).

In simple leaf speed tests, all leaves travel together.

In complex leaf speed tests, every other leaf moves, maximizing inter-leaf friction.

**SHANNON HOLMES, PH.D.**
**MEDICAL PHYSICIST**
**STANDARD IMAGING**

"PIPSpro is the first commercial machine QA software to determine leaf speed loss. Systems that report only maximum and mean leaf speed cannot be used to calculate leaf speed loss, as required by TG-142."

* With logfile-based analysis, PIPSpro is the only commercial software solution able to measure quantitative leaf speed loss and leaf position repeatability.
**MONTHLY QA**

**PHANTOMS**

**QC-3 PHANTOM**  
**CALIBRATED PHANTOM**  
**REF 71350**  
Used to test the image quality from electronic portal imaging devices (EPIDs).

**QCKV-1 PHANTOM**  
**CALIBRATED PHANTOM**  
**REF 71451**  
Ideal for kV imaging systems, including Varian, Elekta, BrainLAB and Cyberknife.

**FC-2 PHANTOM**  
**REF 72187**  
For performing the radiation field vs. light field test and jaw position testing.

**CENTER MARKER PHANTOM**  
**REF 72247**  
For performing the radiation field vs. light field test and jaw position testing.

**CATPHAN**  
**PURCHASED THROUGH YOUR LINAC VENDOR**  
Compatible with model 503, 504, 600 and 604 phantoms.

---

**PIPSpro has streamlined our Monthly QA process. It has made the daunting tasks in TG142 manageable. We currently use it for an Elekta Synergy and image quality for our x-rays on our 3 IBA Proton treatment rooms.”**

**PIPSPRO SOFTWARE/COMPUTER REQUIREMENTS**

**OPERATING SYSTEM** — Windows® 10 Professional, 64-bit recommended

**PROCESSOR** — Dual Core, 1 GHz; Quad Core, 2 GHz Recommended

**MEMORY** — 32-bit OS: 2 GB, 4 GB Recommended 64-bit OS: 4 GB, 8 GB Recommended

**RUNTIME ENVIRONMENT** — .NET 4.5.2

**HARD DRIVE** — 32 GB or greater, 3 GB free space for software setup. Sufficient space to store input image and/or MLC Log files. 5 GB free space if setting up a local copy of SQL Server Express; 25% free space recommended.

**SCREEN RESOLUTION** — 1600×900 (16:9) or higher, 16-bit HiColor or greater

**OPTICAL DRIVE** — Digital Versatile Disc (DVD)

**VIRTUAL MACHINES** — Must support WMI (Windows Management Instrumentation)

**DATABASE MANAGEMENT** — SQL Server 2014 minimum recommended

**CONNECTIVITY** — IPv4 LAN, 100 Mbps or greater
