The following information is provided as a service to our users, customers, and distributors.

The Standard Imaging QA BeamChecker Plus may be ordered with an optional Serial to USB adapter (REF 70503) for data communication with computers lacking a serial port. To ensure proper communication, when using the optional Serial to USB Adapter (REF 70503) with the Power/Data Cradle, the QA BeamChecker Plus power supply must be connected to the cradle as shown in the diagram below.

In addition, if using the adapter with a laptop computer, the laptop must be plugged into a wall outlet with a grounded power supply (3-prong plug). If your laptop does not have a grounded power supply, please contact Standard Imaging for more information.

Future QA BeamChecker Plus manuals will include similar information.
SUBJECT: Using the QA BeamChecker Plus with the Optional Serial to USB Adapter (REF 70503)

This information primarily applies to QA BeamChecker Plus models and a small number of later manufactured QA BeamChecker models (delivered in late 2006 and early 2007). Thus, this information does not apply to most QA BeamChecker models.

If there are any questions or comments regarding this information, please contact Standard Imaging or your authorized dealer.
